COMPANY PROFILE

Name of the Company	:	Velvra Technologies
Address	:	203, Nehru Street, Opposite Ram Nagar, Coimbatore, Tamil Nadu - 641009
Name & Designation of the Authorized Person	:	Mr. Veera, Founder & Manager
Name & Designation of the Supervisor	:	Mr. Veera, Founder & Manager
Contact Number	:	6383370939
Supervisor's Email	:	
Nature of Business by the Company	:	Service

INTERNSHIP CERTIFICATE

ACKNOWLEDGEMENT

First and foremost, I would like to express my sincere gratitude to **Mr. Veera, Founder & Manager of Velvra Technologies**, Coimbatore, for granting me the opportunity to undertake my internship at the organisation and for his continuous guidance, patience, and mentorship throughout the internship period. His willingness to involve me directly in real business development activities gave me an invaluable, practical understanding of how a technology company operates and grows.

I am deeply thankful to the **Principal** and the **Head of the Department** of Al-Ameen Engineering College, Erode for providing the necessary infrastructure and encouragement to successfully accomplish this internship.

My profound thanks to our **Internship Coordinator and Faculty Members, Department of Electronics and Communication Engineering**, Al-Ameen Engineering College, Erode for their constant support, valuable suggestions, and encouragement, which played a pivotal role in the completion of this internship.

Lastly, I wish to thank my **parents and friends** for their unwavering encouragement and moral support, which greatly contributed to the successful completion of this internship.

SURESHKUMAR S

730223205025

WORK DESCRIPTION

During the internship period at Velvra Technologies, Coimbatore, spanning from 22nd June 2026 to 3rd July 2026 (10 working days, with one day of leave availed on 26th June 2026), I was engaged directly with the Founder and Manager in the Business Development and Management function of the organisation, rather than in a technical product-engineering role. The internship provided first-hand exposure to how a technology company identifies prospects, understands client requirements, translates those requirements into deliverable business solutions, prices and proposes those solutions, and manages the resulting client relationship through to closure and beyond.

Unlike a conventional technical internship, this engagement focused on the business and client-facing side of solution delivery. I was involved in lead generation, requirement gathering, quotation and proposal preparation, client communication, competitor and market research, and customer relationship management. Working directly under the Founder allowed me to observe and participate in the actual decision-making process behind how a small technology company evaluates opportunities, prices its services, and grows its client base.

The work followed a structured business development cycle consisting of prospecting, requirement discovery, solution planning, proposal drafting, client presentation, negotiation, and follow-up. Daily activities were reviewed with the Founder, and each client interaction was treated as a learning opportunity to understand customer psychology, objection handling, and the practical realities of selling technology services to non-technical business owners.

This internship primarily focused on Business Development and Management activities within a technology company, providing practical exposure to the complete client acquisition and project management lifecycle rather than technical product development. This hands-on experience strengthened my understanding of lead generation, client requirement analysis, proposal preparation, pricing strategies, negotiation, customer relationship management, and business communication..

4.1 PROJECTS

During my internship at **Velvra Technologies**, I actively participated in various **business development and management** activities that provided me with practical exposure to real-world business operations. Rather than focusing on **technical development**, I worked closely with the Founder and Manager to understand the complete business lifecycle, from identifying potential clients to successfully converting them into long-term customers.

The internship involved **client prospecting, lead generation, customer requirement analysis, proposal preparation, pricing strategy, project estimation, product presentations, customer relationship management (CRM), and business planning**. I also learned how customized business solutions are designed based on client requirements, how project costs are estimated, and how business negotiations are carried out in a professional environment.

Throughout the internship, I gained hands-on experience in understanding **customer needs, analyzing business challenges**, preparing suitable business proposals, maintaining follow-up communications, and contributing to business growth strategies. These practical experiences enhanced my **communication, negotiation, planning, and problem-solving skills** while providing valuable insights into how a growing company manages client relationships and delivers successful business solutions.

4.1.1 LEAD GENERATION AND CLIENTS ACQUISITION :

- Identified potential clients through online research and business directories.
- Generated quality business leads using LinkedIn, Google, and referrals.
- Understood customer business requirements before initiating discussions.
- Learned effective methods of approaching prospective clients through calls, emails, and professional communication.
- Assisted in maintaining a structured lead database for future follow-ups.
- Monitored the progress of leads throughout the sales pipeline until conversion or closure.
- Learned how to qualify leads based on budget, project scope, timeline, and business requirements.
- Gained practical knowledge of customer relationship management (CRM) processes and lead nurturing strategies.

Lead Identification Process

The primary activities involved in lead generation included:

- Identifying potential clients from different industries.
- Researching company profiles and business requirements.
- Collecting contact information of decision-makers.
- Categorizing leads based on business requirements and project potential.
- Maintaining an organized lead database for future follow-ups.

Client Communication and Outreach

After identifying potential customers, the next step involved establishing professional communication through different channels.

The communication activities included:

- Cold Calling
- Cold Emailing
- WhatsApp Business Communication
- LinkedIn Outreach
- Scheduling Client Meetings
- Initial Requirement Discussion
- Follow-up Communication

Each interaction was carried out professionally by **understanding customer requirements** before **presenting the company's services**.

Requirement Understanding

Instead of directly promoting products, emphasis was placed on understanding the customer's business problems and operational requirements.

The requirement gathering process included:

- Understanding the client's business model.
- Identifying operational challenges.
- Discussing current business operations and requirements.
- Understanding customer expectations.
- Collecting functional and business requirements.

This approach helped in recommending suitable business solutions that matched the client's business objectives.

4.1.2 CLIENT REQUIREMENT ANALYSIS AND BUSINESS CONSULTATION

The Client Requirement Analysis and Business Consultation process was one of the most important activities carried out during my internship. The primary objective was to understand the client's business operations, identify their challenges, and recommend suitable business solutions that could improve efficiency and support business growth .

Before proposing any product or service, detailed discussions were conducted with clients to gather information about their business requirements, existing workflows, and future expectations. This process helped ensure that the proposed solutions aligned with the client's objectives and operational needs..

Requirement Analysis Activities

The major activities involved in requirement analysis included:

- Conducting discussions with clients to understand their business processes.
- Identifying operational challenges and areas requiring improvement.
- Gathering detailed functional and non-functional requirements.
- Understanding client expectations, goals, and project objectives.
- Analyzing existing systems and workflows used by the client.
- Evaluating business requirements to determine suitable business solutions.
- Documenting client requirements for future project planning.
- Identifying opportunities for process automation and digital transformation.

Business Consultation Activities

The consultation process focused on helping clients identify the most suitable business solutions based on their business requirements, operational challenges, and future growth objectives. Every consultation was conducted with the aim of understanding the client's expectations and recommending customized solutions that would improve their business efficiency and productivity.

The major consultation activities included:

- Conducting detailed discussions with clients to understand their business operations.
- Identifying customer pain points and operational challenges.
- Recommending suitable products and digital solutions based on business needs.
- Explaining product features, functionalities, and business benefits in a professional manner.
- Demonstrating how the proposed solution could improve business performance and streamline operations.
- Assisting clients in selecting the most appropriate solution based on their budget and business goals.
- Preparing customized business proposals and solution recommendations.

Business Strategy and Solution Planning

Each client requirement was carefully analyzed before recommending a solution. Business strategies were developed by considering the client's industry, operational workflow, target customers, budget constraints, and long-term business objectives. This approach ensured that every proposed solution was practical, scalable, and capable of supporting future business growth.

Client Engagement and Communication

Professional communication played a vital role throughout the consultation process. Regular meetings, follow-up discussions, and requirement clarification sessions were conducted to maintain transparency and build strong client relationships. Continuous interaction helped in understanding evolving business solutions.

Challenges Faced

Some of the challenges encountered during the consultation process included:

- Understanding diverse business requirements from different industries.
- Identifying the exact needs of clients with limited technical knowledge.
- Managing changing client requirements during discussions.
- Handling customer objections and pricing concerns professionally.
- Communicating complex business solutions in a simple and understandable manner.
- Coordinating multiple client discussions within project timelines.

These challenges were addressed through continuous learning, effective communication, active listening, detailed requirement analysis, and guidance from the Founder and Manager.

Decision Making and Solution Planning

During the consultation process, I observed how business decisions were made based on customer requirements, project feasibility, budget constraints, and expected business outcomes. Before recommending any solution, various factors such as implementation cost, development timeline, scalability, maintenance requirements, and long-term business value were carefully evaluated. This systematic approach ensured that every proposed solution was practical, cost-effective, and aligned with the client's current and future business objectives. Through this experience, I gained valuable knowledge about strategic decision-making, project planning, and delivering customer-centric solutions that contribute to sustainable business growth.

Learning Outcome

This activity significantly enhanced my knowledge of business consultation, requirement gathering, customer relationship management, solution planning, proposal preparation, and professional communication. It improved my ability to analyze business requirements, recommend suitable solutions, negotiate with clients, and contribute effectively to business development activities in a real-world professional environment.

4.1.3 PROPOSAL PREPARATION AND PRODUCT PRESENTATION

The **Proposal Preparation** and **Product Presentation** were among the key activities carried out during my internship. The primary objective of this activity was to **prepare professional business proposals and effectively present business solutions to potential clients** based on their business requirements. This process helped clients understand the value of the proposed solution, **project scope, estimated cost, implementation plan, and expected business outcomes**.

A well-structured proposal plays a significant role in converting potential leads into customers, as it provides a clear overview of the company's services and demonstrates how the proposed solution can address the client's business challenges. Throughout the internship, I learned the importance of presenting products and services in a professional and customer-focused manner.

Project Objectives

The objectives of the project included:

- Prepare professional business proposals for potential clients.
- Understand customer requirements before recommending solutions.
- Present products and services in a clear and effective manner.
- Explain project scope, features, and implementation strategies.
- Assist in preparing quotations and pricing details.
- Improve client engagement through professional presentations.
- Support the business development process by building customer confidence.

Proposal Preparation

Business proposals were prepared after thoroughly analyzing the client's requirements and business objectives. Each proposal was customized according to the client's industry, operational needs, project scope, and expected outcomes:

- Company Introduction
- Client Requirement Summary
- Proposed Business Solution
- Key Features and Functionalities

- Development Timeline
- Project Scope
- Pricing and Cost Estimation
- Payment Milestones
- Support and Maintenance Details
- Terms and Condition

Each proposal was designed to provide clients with a clear understanding of the recommended solution and its business benefits.

Product Presentation

Products and services were presented professionally to help clients understand how the proposed solution would improve their business operations.

The presentation activities included:

- Introducing the company and its services.
- Explaining product features and business benefits.
- Demonstrating how the solution addresses customer pain points.
- Presenting implementation plans and project timelines.
- Discussing pricing models and service packages.
- Answering client questions and resolving concerns.
- Highlighting the long-term value of the proposed solution

Client Communication

Effective communication was maintained throughout the proposal and presentation process. Client feedback was carefully recorded, and additional discussions were conducted whenever modifications or clarifications were required. This helped build trust and ensured that the proposed solution aligned with the client's expectations and business goals.

Business Value

Preparing proposals and presenting products helped improve the company's ability to communicate its services effectively and increased the chances of converting potential clients into long-term customers. The experience also provided practical exposure to professional sales presentations, customer engagement, and solution-based business development.

Learning Outcome

Through this activity, I gained practical knowledge of proposal writing, product presentation, business communication, pricing discussions, customer engagement, and professional presentation techniques. It enhanced my confidence in interacting with clients, understanding business requirements, and presenting customized business solutions in a structured and professional manner. This experience also strengthened my communication, analytical thinking, and business development skills in a real-world corporate environment.

4.1.4 PRICING STRATEGY AND PROJECT ESTIMATION

The **Pricing Strategy and Project Estimation** were important aspects of my internship, where I learned how business projects are evaluated and priced based on client requirements, project complexity, available resources, and expected business outcomes. This activity provided practical exposure to the commercial side of business project delivery and helped me understand how organizations prepare competitive quotations while ensuring project profitability.

Unlike a fixed pricing approach, every business project required detailed analysis before determining the overall cost. Various factors such as project scope, required features, development timeline, technology requirements, customization, maintenance, and future scalability were considered before preparing the final quotation.

Project Objectives

The objectives of this activity were:

- Understand business project pricing strategies.
- Learn project cost estimation techniques.
- Analyze project scope and business requirements.
- Prepare quotations based on client needs.
- Estimate project duration and resource allocation.
- Understand payment milestones and budgeting.
- Support clients in selecting cost-effective business solutions.

Project Cost Estimation

Project estimation involved analyzing multiple business and technical factors before preparing a quotation.

The estimation process included:

- Understanding client requirements.
- Defining project scope.
- Identifying required project deliverables.
- Estimating development effort.
- Planning project timelines.
- Calculating implementation costs.
- Estimating maintenance and support costs.
- Preparing detailed quotations.
- Planning payment schedules.
- Reviewing project feasibility.

Pricing Strategy

Different pricing approaches were studied based on the nature and complexity of each project.

The pricing considerations included:

- Project complexity.
- Number of project deliverables.
- Customization requirements.
- Development duration.
- Resource availability.
- Client budget.
- Long-term maintenance requirements.
- Future scalability.
- Additional feature requests.
- Business value delivered to the client.

These factors helped in preparing pricing models that were both competitive and beneficial for the organization.

Project Planning

Proper planning was carried out before finalizing the quotation.

Planning activities included:

- Defining project milestones.
- Scheduling development phases.
- Estimating delivery timelines.
- Allocating available resources.
- Planning client review meetings.
- Monitoring project progress.
- Identifying potential project risks.

Client Discussion

Pricing and estimation were explained clearly to clients during business discussions. The project scope, expected deliverables, implementation timeline, and payment structure were discussed to ensure transparency and mutual understanding before project approval.

Learning Outcome

This activity significantly enhanced my understanding of business project estimation, pricing strategies, quotation preparation, budgeting, project planning, and business communication. It improved my analytical thinking and decision-making skills while helping me understand how growing companies determine project costs and deliver value-based solutions to their clients.

4.2 TOOLS AND TECHNOLOGIES

A wide range of business, communication, productivity, and AI-assisted tools were used throughout the internship to support lead generation, client engagement, proposal preparation, and overall business operations. Each tool played a specific role in ensuring that daily business development activities were carried out efficiently and professionally. The tools used during the internship are described in detail below.

Microsoft Excel

Microsoft Excel was one of the most frequently used tools during the internship and was essential for maintaining lead trackers, sales pipelines, pricing sheets, and client databases. It was used to organize prospect information, calculate project cost estimates, prepare comparative pricing tables, and track the progress of ongoing client negotiations. Formulas and simple functions such as SUM, VLOOKUP, and conditional formatting were used to build dynamic trackers that updated automatically as new client data was added. Excel also supported the preparation of quotation summaries and follow-up schedules, allowing systematic monitoring of every stage of the sales pipeline. Its structured, tabular format made it easy to sort and filter leads based on priority, industry, and deal stage, which directly improved the efficiency of the business development process throughout the internship.

Microsoft Word

Microsoft Word was used extensively for preparing professional business documents such as client proposals, cover letters, meeting minutes, and internal reports. Its formatting tools helped maintain a consistent, professional structure across all client-facing documents, including headings, numbered sections, and company letterheads. Word was particularly useful for drafting detailed business proposals that combined written explanations with structured sections covering scope, deliverables, and terms. Track changes and comments were occasionally used while revising proposal drafts based on feedback from the Founder, which helped in understanding professional document review practices. Overall, Word served as the primary tool for producing polished, print-ready business documentation that could be shared confidently with prospective clients.

Google Docs

Google Docs was used for collaborative drafting of proposals, requirement notes, and internal documentation that required real-time input from the Founder. Its cloud-based nature allowed documents to be edited and reviewed simultaneously without the delays of sending files back and forth, which was particularly valuable during time-sensitive client discussions. Comments and suggestion mode were used to receive direct feedback on draft content, helping refine the tone and clarity of client communication. Version history also made it possible to track how a document evolved through multiple review cycles. Google Docs' accessibility from any device ensured that work could continue smoothly even outside a fixed workstation, which suited the fast-paced nature of startup operations.

Google Sheets

Google Sheets was used as a shared, cloud-based alternative to Excel for tracking data that required real-time visibility across the team, such as the live lead pipeline and follow-up calendar. Because multiple stakeholders could view and update the same sheet simultaneously, it became the primary tool for maintaining an always-current view of client status, deal value, and next action items. Formulas were used to automatically flag overdue follow-ups and calculate pipeline totals. Google Sheets' integration with Google Forms was also used to collect and organize structured client requirement responses. This tool reinforced the importance of maintaining clean, shareable data structures in a business development environment.

Google Drive

Google Drive served as the central repository for all business documents, proposals, quotations, and client correspondence generated during the internship. Organizing files into structured folders by client name and project stage made it easy to retrieve historical documents during follow-up discussions. Shared drive access allowed the Founder to review and approve materials before they were sent to clients, ensuring quality control at every stage. Google Drive's version tracking and file recovery features also provided a safety net against accidental changes. This experience highlighted the importance of disciplined digital record-keeping in maintaining a professional and auditable business workflow.

Google Workspace

Google Workspace integrated Gmail, Docs, Sheets, Drive, Meet, and Calendar into a single connected environment that supported nearly every business activity performed during the internship. Working within this ecosystem demonstrated how a small startup can operate efficiently without dedicated enterprise software, using integrated cloud tools to manage communication, documentation, and scheduling. Shared calendars synced automatically with meeting invites sent through Gmail, while documents created in Docs and Sheets could be instantly shared with clients or the Founder. This unified workflow reduced administrative overhead and allowed more time to be spent on core business development activities such as client engagement and proposal preparation.

WhatsApp Business

WhatsApp Business was the primary channel for quick, informal communication with clients, particularly for initial outreach, scheduling calls, and sending quick updates or reminders. Its business profile features, including catalog sharing and quick reply templates, made it possible to present company information professionally even in a casual messaging format. WhatsApp was especially effective for maintaining ongoing relationships with clients who preferred fast, mobile-first communication over email. Message read receipts also helped gauge client engagement and prioritize follow-ups. This tool demonstrated how informal digital channels can be used professionally to accelerate client responsiveness in a startup sales cycle.

LinkedIn

LinkedIn was used extensively for lead generation, prospecting, and understanding the professional background of potential clients and decision-makers before outreach. Searching for relevant company pages and individual profiles helped identify the right point of contact within an organization, which significantly improved the quality of initial conversations. LinkedIn was also used to research competitor activity and industry trends, providing context for business consultations. Sending personalized connection requests and messages, rather than generic outreach, proved to be a more effective way of starting meaningful business conversations. This experience built a strong practical understanding of professional networking as a business development skill.

Google Search

Google Search was used daily to conduct market research, verify company information, and study competitor offerings before client meetings. It supported quick fact-checking during client discussions, allowing accurate and confident responses to questions about industry standards or competitor pricing. Search was also used to research potential leads, identify their online presence, and understand their business needs prior to outreach. This constant use of search as a research tool reinforced the importance of being well-informed before every client interaction, which directly improved the credibility of business consultations conducted during the internship.

Google Meet

Google Meet was used for conducting virtual client meetings, internal discussions with the Founder, and requirement-gathering sessions when in-person meetings were not possible. Screen sharing during these calls allowed proposals, pricing sheets, and product demonstrations to be presented clearly to clients in real time. Google Meet's simplicity and browser-based access made it convenient for scheduling calls with clients who were unfamiliar with more complex conferencing software. These virtual meetings were essential in maintaining consistent client engagement throughout the sales cycle, from initial consultation to final negotiation.

Zoom

Zoom was used as an alternative video conferencing platform for client meetings, particularly when clients specifically preferred it over Google Meet. Its features such as virtual backgrounds, recording, and breakout discussions supported more structured business presentations and negotiation sessions. Recording key client calls, with appropriate permission, allowed important requirement details and commitments to be reviewed afterward, reducing the risk of miscommunication. Zoom's reliability for larger or more formal meetings made it a useful addition to the internship's communication toolkit alongside Google Meet.

Canva

Canva was used to design visually appealing proposal covers, pitch decks, social media promotional material, and client-facing presentations without requiring advanced graphic design skills. Its drag-and-drop interface and ready-made templates made it possible to quickly produce professional-looking marketing collateral.

that strengthened the company's brand image during client interactions. Canva was particularly useful for creating quick visual summaries of product offerings that could be shared alongside detailed written proposals. This tool demonstrated how accessible design software can meaningfully improve the perceived professionalism of a startup's client communication.

Microsoft PowerPoint

Microsoft PowerPoint was used to build structured client presentations and internal pitch decks that summarized proposed solutions, pricing, and project timelines. Presentations followed a consistent narrative structure covering the client's problem, the proposed solution, implementation plan, and pricing, which made client meetings more persuasive and organized. Slide design incorporated the company's branding to reinforce professionalism during in-person and virtual pitches. Practicing the delivery of these presentations also improved verbal communication and confidence when presenting solutions directly to founders and decision-makers of client companies.

Gmail

Gmail was the primary platform for formal written communication with clients, including sending proposals, quotations, meeting confirmations, and follow-up emails. Maintaining a professional tone, clear subject lines, and organized email threads was essential for building trust with prospective clients. Gmail's labeling and search features were used to organize client correspondence by project stage, making it easy to track the history of communication with each lead. Scheduled sending and follow-up reminders were also used to ensure timely responses, which is critical in maintaining momentum during business development conversations.

Google Calendar

Google Calendar was used to schedule and track client meetings, internal discussions, and follow-up deadlines throughout the internship. Setting reminders for pending follow-ups helped prevent leads from going cold due to delayed responses, which is a common challenge in business development. Shared calendar visibility with the Founder also made it easier to coordinate joint client calls and avoid scheduling conflicts. This consistent use of calendar tools reinforced the importance of time management and structured planning in managing a growing pipeline of client relationships.

CRM Software

A CRM (Customer Relationship Management) tool was used to systematically track leads, log client interactions, and monitor the status of each deal as it moved through the sales pipeline. Recording details such as client requirements, communication history, and next steps in one central system made it possible to manage multiple client relationships simultaneously without losing track of important details. The CRM also helped identify which leads required immediate follow-up and which were still in early-stage discussions. This experience provided practical, hands-on exposure to structured customer relationship management, a core discipline in professional business development.

ChatGPT

ChatGPT was used as a productivity aid for drafting initial versions of client emails, refining proposal language, brainstorming outreach messaging, and summarizing research on potential client industries. It helped accelerate the first draft of business documents, which were then reviewed and customized to match the specific client's tone and requirements. ChatGPT was also used to prepare talking points before important client calls and to think through possible objections a client might raise during negotiation. Using an AI assistant as part of the daily workflow provided practical experience in combining human judgment with AI-assisted drafting for business communication.

Claude AI

Claude AI was used similarly to ChatGPT, primarily for reviewing and refining written business content such as proposals, quotations, and client communication drafts. It was particularly useful for restructuring lengthy requirement notes into clear, organized proposal sections and for checking the professional tone of client-facing messages before they were sent. Claude AI also assisted in analyzing competitor information gathered during market research and organizing it into concise summaries for internal discussion. This exposure to multiple AI assistants highlighted how such tools can meaningfully support, rather than replace, human decision-making in a business development role.

Proposal Templates

Standardized proposal templates were developed and refined during the internship to ensure that every client proposal followed a consistent, professional structure covering the client's requirement, the proposed solution, timeline, and pricing. Using a reusable template significantly reduced the time required to prepare new proposals while maintaining a high standard of presentation. Each template was customized based on the specific client's industry and requirement, striking a balance between efficiency and personalization. Working with proposal templates provided a clear understanding of how professional service businesses standardize client-facing documentation without sacrificing relevance.

Quotation Documents

Quotation documents were prepared for nearly every client engagement, detailing itemized costs, project scope, payment terms, and validity periods. Preparing accurate quotations required close collaboration with the Founder to correctly estimate costs based on project complexity and required resources. These documents needed to be precise and transparent, as they directly influenced the client's purchasing decision and formed the basis of subsequent negotiations. Learning to prepare clear, well-structured quotation documents built a strong foundation in pricing communication and commercial documentation practices.

Presentation Slides

Presentation slides were prepared for client pitches, internal reviews, and product demonstrations, summarizing key information in a visually structured format. Slides were designed to communicate complex business ideas concisely, using a logical flow from problem statement to proposed solution and expected outcomes. Preparing these presentations improved the ability to distill detailed business discussions into clear, digestible visual summaries suitable for time-constrained client meetings. This skill proved valuable not only for external client pitches but also for internal strategy discussions with the Founder.

Table 4.1 summarizes the purpose, business activity, and importance of each tool used during the internship.

Tool	Purpose	Business Activity	Importance
Microsoft Excel	Data tracking & calculation	Lead tracker, pricing sheets	High
Microsoft Word	Document drafting	Proposals, reports	High
Google Docs	Collaborative drafting	Proposal review with Founder	High
Google Sheets	Shared data tracking	Live pipeline tracking	High
Google Drive	File storage	Document repository	High
Google Workspace	Integrated productivity	Overall operations	High
WhatsApp Business	Client messaging	Outreach & follow-up	High
LinkedIn	Prospecting	Lead generation, research	High
Google Search	Research	Market & competitor research	Medium
Google Meet	Video conferencing	Client meetings	High
Zoom	Video conferencing	Client meetings	Medium
Canva	Design	Pitch decks, marketing material	Medium
Microsoft PowerPoint	Presentation design	Client pitches	High
Gmail	Email communication	Formal client correspondence	High
Google Calendar	Scheduling	Meeting & follow-up planning	Medium
CRM Software	Client management	Pipeline & interaction tracking	High
ChatGPT	AI writing assistance	Drafting & brainstorming	Medium
Claude AI	AI writing assistance	Content review & analysis	Medium
Proposal Templates	Standardization	Client proposals	High
Quotation Documents	Cost communication	Pricing & negotiation	High
Presentation Slides	Visual communication	Pitches & demos	Medium

Table 4.2 presents the hardware configuration of the system used to carry out the above business activities during the internship.

Component	Specification
Processor	Intel Core i5 (11th Generation)
RAM	8 GB DDR4
Storage	512 GB SSD
Operating System	Windows 11
Internet	Broadband, minimum 50 Mbps
Laptop	Standard business-configuration laptop

4.3 CHALLENGES

Working in a real business development role presented a wide range of practical challenges that required continuous learning, adaptability, and guidance from the Founder. Each challenge contributes meaningfully to developing professional business skills. The key challenges faced during the internship are described in detail below.

Finding Quality Leads

One of the earliest challenges faced during the internship was identifying leads that genuinely matched the company's target client profile. Many initial contacts turned out to be uninterested or unable to afford the proposed solutions, resulting in wasted effort on unqualified prospects. Learning to filter leads based on industry, company size, and budget indicators became essential to improving the efficiency of the prospecting process. Over time, using LinkedIn and market research more strategically, combined with guidance from the Founder on identifying high-potential sectors, significantly improved the quality of leads entering the pipeline.

Finding Decision Makers

Reaching the actual decision-maker within a client organization, rather than a junior employee without purchasing authority, was a recurring difficulty. Several early conversations stalled because they were held with individuals who could not approve budgets or sign agreements. Researching company structures on LinkedIn and asking clarifying questions early in the conversation helped identify the right point of contact more consistently. This challenge highlighted the importance of qualifying not just the company, but the specific individual being engaged with, before investing significant time in a conversation.

Understanding Customer Requirements

Clients often described their business problems in vague or non-technical terms, making it difficult to translate their needs into a clear, actionable scope of work. Some clients were also unsure of exactly what they needed until guided through a structured discussion. Developing a habit of asking targeted, open-ended questions and summarizing the client's requirement back to them for confirmation greatly improved the accuracy of requirement gathering. This iterative clarification process became a standard part of every client consultation conducted during the internship.

Handling Customer Objections

Clients frequently raised objections related to price, timeline, or uncertainty about the return on investment of the proposed solution. Responding to these objections confidently, without being defensive or overpromising, was initially challenging. With practice and guidance from the Founder, objection handling improved by focusing on understanding the root concern behind the objection and addressing it with relevant evidence, such as comparable case examples or a clearer breakdown of value delivered. This experience built resilience and structured thinking under pressure during live client conversations.

Pricing Discussions

Discussing pricing with clients, particularly small businesses and startups with limited budgets, required a careful balance between maintaining fair value for the company and remaining flexible enough to close the deal. Some clients attempted aggressive price negotiations, which required calm, confident responses grounded in the actual cost and value of the deliverables. Learning to justify pricing using clear cost breakdowns, rather than simply defending a number, made these conversations considerably more productive and professional.

Negotiation

Negotiating terms such as payment schedules, project scope, and delivery timelines with clients who had differing expectations was a demanding but valuable challenge. Early negotiations sometimes resulted in scope changes that were not properly documented, causing confusion later. Learning to negotiate systematically, documenting every agreed change in writing, and knowing when to involve the Founder for final approval on major terms helped develop a more structured and professional negotiation approach over the course of the internship.

Preparing Business Proposals

Preparing proposals that were both persuasive and realistic required balancing the client's expectations with what could actually be delivered within budget and timeline constraints. Early proposals were sometimes too generic and did not sufficiently address the specific client's pain points. Over time, proposals became more tailored, incorporating specific details gathered during requirement discussions, which significantly improved their effectiveness in converting prospects into clients.

Managing Customer Follow-ups

With multiple leads at different stages of the sales pipeline simultaneously, keeping track of who needed to be followed up with, and when, was a significant organizational challenge. Some promising leads went cold due to delayed follow-up in the early weeks of the internship. Adopting a disciplined system using the CRM and calendar reminders resolved this issue, ensuring that no lead was left unattended for too long and that follow-up communication remained timely and consistent.

Time Management

Balancing lead generation, client meetings, proposal preparation, and administrative tasks within limited working hours required careful prioritization. In the early stages, too much time was spent on lower-priority leads at the expense of more promising opportunities. Learning to rank tasks by urgency and potential business value, and blocking dedicated time for deep-focus tasks such as proposal writing, improved overall productivity significantly as the internship progressed.

Communication Barriers

Communicating clearly with clients from diverse professional backgrounds, some of whom were not familiar with technical or business terminology, occasionally led to misunderstandings. Simplifying language, using relatable examples, and confirming understanding at each stage of the conversation helped bridge this gap. This challenge reinforced the importance of adapting communication style to the audience, a skill directly applicable to any future client-facing role.

Market Competition

Understanding how the company's offerings compared to competitors, and articulating a clear differentiator to clients, was an ongoing challenge given the competitive nature of the business development landscape. Conducting regular competitor research and staying updated on market trends helped in confidently positioning the company's value proposition during client conversations, rather than competing purely on price.

Changing Customer Requirements

Client requirements sometimes changed mid-discussion or even after a proposal had been shared, requiring quick adaptation without derailing the overall negotiation.

Building Customer Trust

As a first-time point of contact for many prospective clients, establishing credibility and trust without an extensive personal track record was challenging. Consistency in communication, transparency about what the company could realistically deliver, and prompt follow-through on commitments gradually built trust with clients over the course of multiple interactions. This reinforced that trust in business development is earned incrementally through reliable behavior rather than through a single persuasive pitch.

Sales Conversion

Converting an interested lead into a signed client involved multiple touchpoints and required patience, as very few deals closed after a single conversation. Understanding the typical sales cycle length for the company's offerings, and pacing follow-ups accordingly, improved conversion rates over time. This challenge provided direct insight into how sales pipelines function in practice, including the reality that most leads require sustained, well-timed engagement before converting.

Learning Startup Culture

Adjusting to the fast-paced, resource-constrained, and highly flexible working environment of a startup was different from the structured expectations of academic coursework. Tasks and priorities could shift quickly based on client needs, requiring adaptability and comfort with ambiguity. Observing how the Founder made rapid decisions with limited information provided valuable insight into the practical realities of startup operations.

Working with Real Clients

Engaging directly with real clients, rather than working on simulated academic exercises, carried a different level of responsibility, as mistakes could have real business consequences. This heightened accountability initially caused some hesitation, but gradually built confidence as client interactions were handled successfully. Working with real clients provided authentic, high-stakes practice that is difficult to replicate in a classroom setting.

Working Directly Under the Founder

Reporting directly to the Founder, rather than through a layered management structure, meant taking on greater responsibility and receiving direct, immediate feedback on every task.

Managing Multiple Client Discussions

Handling several client discussions simultaneously, each at a different stage and with different requirements, required careful organization to avoid confusing details between clients. Maintaining separate, well-labeled notes and CRM entries for each client relationship prevented cross-contamination of information and ensured that each client received accurate, personalized communication despite the volume of concurrent conversations.

Table 4.3 summarizes each challenge along with its business area, the resolution approach adopted, and the corresponding learning outcome.

Challenge	Area	Resolution	Learning Outcome
Finding Quality Leads	Prospecting	Targeted filtering criteria	Lead qualification skills
Finding Decision Makers	Prospecting	LinkedIn research	Stakeholder identification
Understanding Requirements	Consultation	Structured questioning	Requirement analysis
Handling Objections	Sales	Value-based responses	Objection handling
Pricing Discussions	Pricing	Transparent cost breakdown	Pricing communication
Negotiation	Sales	Documented agreements	Negotiation skills
Business Proposals	Documentation	Tailored proposals	Proposal writing
Customer Follow-ups	CRM	CRM & reminders	Pipeline discipline
Time Management	Operations	Task prioritization	Productivity
Communication Barriers	Communication	Simplified language	Adaptive communication
Market Competition	Strategy	Competitor research	Market positioning
Changing Requirements	Consultation	Scope revision process	Flexibility
Building Trust	Relationship	Consistent follow-through	Trust building
Sales Conversion	Sales	Paced follow-up cadence	Sales cycle understanding
Startup Culture	Operations	Adaptability	Startup readiness
Real Clients	Client Handling	Accountable execution	Professional confidence
Founder Mentoring	Growth	Direct feedback loops	Accelerated learning
Multiple Discussions	Organization	Structured record-keeping	Multitasking ability

4.4 PROBLEM SOLVING APPROACHES

Every challenge encountered during the internship was approached as an opportunity to develop structured, professional problem-solving skills rather than as a setback. Working directly under the Founder of Velvra Technologies provided constant exposure to real-time decision-making, which shaped a practical, business-oriented approach to solving problems as they arose in daily operations.

Business analysis formed the foundation of the problem-solving approach used throughout the internship. Before responding to any client challenge, the situation was first broken down into its core components: the client's actual requirement, the constraints involved (such as budget or timeline), and the available options for addressing the gap between them. This structured analysis prevented reactive decision-making and ensured that every response to a client issue was grounded in a clear understanding of the underlying business context, rather than a surface-level reaction to the immediate problem.

Critical thinking was applied when evaluating client objections and negotiation demands. Rather than accepting a client's stated objection at face value, the underlying concern was identified first. For example, a client objecting to price was often more concerned about perceived risk or unclear value than the number itself. Recognizing this distinction allowed responses to address the true source of hesitation, which proved far more effective than simply offering a discount or reiterating the original price.

Decision making under time pressure was a skill developed through frequent, fast-paced client interactions where immediate responses were expected. Learning to make sound, quick decisions, such as whether a lead was worth pursuing further or whether a proposed scope change was reasonable, required balancing intuition built from experience with the guidance and judgment shared by the Founder. Over time, this reduced hesitation and improved the speed and quality of on-the-spot decisions during live client conversations.

Negotiation strategy was refined through repeated practice across multiple client engagements. A consistent approach was adopted: understanding the client's priorities before proposing terms, anchoring discussions around value rather than price alone, and always

documenting agreed changes in writing to avoid future disputes. This structured strategy replaced the more improvised negotiation attempts made early in the internship and led to more balanced.

Customer psychology played an important role in shaping how proposals and pitches were framed. Observing how different clients responded to urgency, social proof, and risk-reduction language helped tailor communication for maximum impact. Recognizing that decision-makers were often influenced as much by confidence and clarity of presentation as by the technical merits of a proposal reshaped how business consultations and pitches were structured going forward.

Business planning skills were exercised while helping structure project timelines, cost estimates, and delivery milestones for client engagements. Each proposal required realistic planning that balanced client expectations with the company's actual delivery capacity. Learning to build in reasonable buffers for unforeseen delays, while still presenting a confident and achievable timeline to the client, was an important lesson in practical business planning.

Founder guidance was the single most valuable resource in solving unfamiliar problems throughout the internship. Whenever a client situation exceeded existing experience, such as an unusual pricing negotiation or a complex requirement, the Founder's direct mentorship provided context, precedent, and strategic direction that could not have been learned from documentation alone. This close mentorship model accelerated the pace of learning considerably compared to a more distant or hierarchical reporting structure.

Client communication was continuously refined based on real feedback from actual conversations. Early emails and calls were sometimes too formal or too vague; over time, communication became more direct, more empathetic to the client's constraints, and more focused on clearly articulated next steps. This iterative refinement of communication style was itself a problem-solving process, applied to the recurring challenge of ensuring every client interaction moved the relationship forward.

Sales strategy evolved from an initially broad, undifferentiated outreach approach to a more targeted strategy focused on qualified leads within specific industries where the company's offerings provided clear value. This shift, driven by analyzing which types of leads converted most successfully, significantly improved the efficiency of the sales pipeline and reduced time.

The CRM system, it became possible to manage a growing number of simultaneous client relationships without losing important context, ensuring that every lead received timely and informed follow-up.

Professional growth throughout the internship was driven by consistently reflecting on what worked and what did not in each client interaction, then deliberately adjusting the approach for the next opportunity. This habit of reflective practice, encouraged by regular feedback sessions with the Founder, built a stronger foundation for continuous improvement that extends well beyond the internship itself.

Leadership exposure came from observing and occasionally assisting in company-level decisions, such as prioritizing which leads to pursue or how to position the company against competitors. This exposure to founder-level thinking provided a broader perspective on business operations than a typical entry-level task-based role would offer, and clarified what leadership and ownership look like in a real startup environment.

Confidence building was a gradual outcome of successfully navigating difficult client conversations, negotiations, and objections over the course of the internship. Each successfully resolved challenge, from handling a tough pricing negotiation to converting a hesitant lead into a client, incrementally built the confidence required to engage with business stakeholders professionally and assertively.

Real-time learning was the dominant mode of skill acquisition throughout the internship, as most business development skills, from lead qualification to proposal writing, were learned through direct, immediate application rather than prior instruction. This hands-on, real-time learning model proved to be significantly more effective at building practical competence than theoretical study alone.

Startup exposure provided a comprehensive understanding of how a young company operates across multiple functions simultaneously, including sales, client servicing, pricing strategy, and operations, often with a very small team. This broad exposure, uncommon in more specialized corporate internships, provided a well-rounded foundation in business development that will be directly valuable in any future entrepreneurial or business-facing role.

4. LEARNING OUTCOMES

4.1 TECHNICAL SKILLS

The internship provided extensive hands-on exposure to core business development skills that form the technical foundation of a career in sales, consulting, or entrepreneurship. These skills, though non-programming in nature, required the same level of structured thinking, precision, and continuous practice as any technical discipline. The key technical skills developed during the internship are summarized below.

Lead Generation

Developed the ability to identify and qualify potential clients using LinkedIn, market research, and referral-based prospecting techniques.

Business Analysis

Learned to break down client requirements and business problems into structured, actionable components to design suitable solutions.

Requirement Gathering

Gained skill in conducting structured client discussions to accurately capture business needs and translate them into project scope.

CRM

Built practical experience in using CRM software to track leads, log interactions, and manage the sales pipeline systematically.

Proposal Writing

Developed the ability to draft clear, persuasive, and realistic business proposals tailored to individual client requirements.

Quotation Preparation

Learned to prepare accurate, itemized quotations covering project scope, cost, and payment terms.

Pricing Strategy

Gained understanding of cost estimation and value-based pricing approaches suited to different client segments.

Business Communication

Strengthened written and verbal communication skills required for professional client interaction across email, calls, and meetings.

Market Research

Developed the ability to research industry trends and client backgrounds to inform business consultations.

Competitor Analysis

Learned to evaluate competitor offerings and positioning to better differentiate the company's value proposition.

Negotiation

Built practical negotiation skills covering pricing, scope, and timeline discussions with clients.

Presentation Skills

Improved the ability to design and deliver clear, structured business presentations and pitches.

Digital Marketing Basics

Gained exposure to basic digital outreach and branding concepts used to support lead generation.

Sales Strategy

Developed an understanding of structuring and prioritizing a sales pipeline for improved conversion outcomes.

Business Documentation

Learned to prepare professional business documents including proposals, quotations, and reports.

Customer Relationship Management

Built the discipline of maintaining consistent, well-documented client relationships throughout the sales cycle.

Table 5.1 summarizes the technical skills acquired during the internship.

Skill	Proficiency Level Gained
Lead Generation	Working Proficiency
Business Analysis	Working Proficiency
Requirement Gathering	Working Proficiency
CRM	Working Proficiency
Proposal Writing	Working Proficiency
Quotation Preparation	Working Proficiency
Pricing Strategy	Working Proficiency
Business Communication	Working Proficiency
Market Research	Working Proficiency
Competitor Analysis	Working Proficiency
Negotiation	Working Proficiency
Presentation Skills	Working Proficiency
Digital Marketing Basics	Working Proficiency
Sales Strategy	Working Proficiency
Business Documentation	Working Proficiency
Customer Relationship Management	Working Proficiency

4.2 SOFT SKILLS

Alongside technical business skills, the internship significantly strengthened a range of soft skills that are essential for any professional, client-facing role. These interpersonal and behavioural competencies were developed through continuous real-world practice rather than theoretical instruction. The key soft skills developed during the internship are summarized below.

Communication

Developed clear, confident, and audience-appropriate communication skills across written and verbal client interactions.

Leadership

Gained early exposure to ownership and initiative by independently managing client relationships from first contact through negotiation.

Negotiation

Strengthened the ability to negotiate terms professionally while balancing client satisfaction with business interests.

Professional Ethics

Learned to maintain honesty, transparency, and integrity in all client commitments and business representations.

Decision Making

Build confidence in making sound, timely decisions during live client interactions and internal planning discussions.

Critical Thinking

Developed the ability to analyze problems logically and evaluate multiple solution paths before responding to challenges.

Presentation Skills

Improved the ability to structure and deliver compelling business presentations to clients and stakeholders.

Time Management

Learned to prioritize tasks effectively while managing multiple client relationships simultaneously.

Problem Solving

Strengthened the ability to identify root causes of business challenges and implement practical resolutions.

Confidence

Built self-assurance through repeated, successful engagement with real clients and high-stakes business conversations.

Adaptability

Developed comfort with the fast-changing, resource-constrained nature of startup operations.

Professional Behaviour

Learned workplace etiquette, professionalism, and appropriate conduct expected in a business environment.

Teamwork

Collaborated closely with the Founder and, where applicable, other stakeholders to achieve shared business goals.

Client Handling

Gained practical experience in managing client expectations, objections, and relationships professionally.

Relationship Building

Developed the ability to build and sustain long-term, trust-based professional relationships with clients.

Table 5.2 summarizes the soft skills developed during the internship.

Skill	Development Level
Communication	Significantly Improved
Leadership	Significantly Improved
Negotiation	Significantly Improved
Professional Ethics	Significantly Improved
Decision Making	Significantly Improved
Critical Thinking	Significantly Improved
Presentation Skills	Significantly Improved
Time Management	Significantly Improved
Problem Solving	Significantly Improved
Confidence	Significantly Improved
Adaptability	Significantly Improved
Professional Behaviour	Significantly Improved
Teamwork	Significantly Improved
Client Handling	Significantly Improved
Relationship Building	Significantly Improved

5. CONCLUSION

5.1 SUMMARY

The internship at Velvra Technologies, Coimbatore, was a valuable and formative experience that significantly strengthened both practical business skills and professional confidence. Working directly under the Founder and Manager, Mr. Veera, in the domain of Business Development and Management, the internship provided authentic, real-world exposure to how a startup identifies, engages, and converts clients into long-term business relationships.

Throughout the internship, practical experience was gained across the complete business development cycle, beginning with lead generation and client prospecting, progressing through requirement gathering and business consultation, and concluding with proposal preparation, pricing negotiation, and deal closure. Each stage of this cycle required a distinct set of skills, from research and analysis to communication and negotiation, all of which were developed through direct engagement with real clients rather than simulated exercises.

A significant part of the internship involved learning startup operations firsthand, including business planning, market research, competitor analysis, and company growth strategy. Working closely with the Founder provided insight into how strategic decisions are made in a resource-constrained environment, and how a small team can execute effectively across multiple business functions simultaneously.

Customer relationship management was another core focus area, with consistent practice in maintaining structured client records, managing follow-ups, and building long-term trust with prospective and existing clients. This experience reinforced the understanding that successful business development is built on consistency, transparency, and sustained engagement rather than one-time persuasive interactions.

Overall, the internship successfully strengthened business development skills, improved professional communication and negotiation abilities, and significantly increased confidence in engaging directly with clients and business stakeholders in a real commercial environment.

5.2 IMPACT

The internship created a meaningful impact on both professional capability and personal confidence. It transformed a largely academic understanding of business concepts into practical, applied experience gained through real client interactions and business decisions.

One of the most significant outcomes of the internship was the confidence gained in independently managing client relationships, from first contact through to successful conversion. Before the internship, understanding of business development was primarily theoretical; afterward, a clear, practical understanding was developed of how leads are generated, qualified, nurtured, and converted into paying clients.

The internship improved analytical and strategic thinking by exposing the intern to real business challenges such as pricing negotiations, objection handling, and competitive positioning. Navigating these challenges under the guidance of the Founder taught a systematic, business-oriented approach to problem solving that differs significantly from purely academic problem-solving methods.

Communication skills improved considerably through regular client interactions, proposal writing, and presentations. Learning to adapt communication style based on the client's background and concerns was a particularly valuable outcome that will be applicable across any future business-facing role.

Working closely with the Founder also provided early exposure to leadership and ownership, as significant responsibility was given for managing client relationships independently. This mentorship-driven learning model accelerated skill development considerably compared to a more distant, task-based internship structure.

Time management and professional discipline were strengthened through the need to balance multiple client relationships and deadlines simultaneously. Overall, the internship has prepared a strong foundation for future opportunities in business development, entrepreneurship, and client-facing professional roles.

5.3 FUTURE GOALS

The internship at Velvra Technologies has strongly influenced future career direction, reinforcing an interest in entrepreneurship and technology-driven business growth. The practical business development experience gained, combined with an existing interest in technology and product development, has shaped a clear set of future goals.

A primary goal is to become an entrepreneur, building on the practical exposure gained during the internship regarding how startups identify opportunities, engage clients, and grow sustainably. This includes an ambition to build SaaS products that solve real business problems, drawing on both the business development perspective gained during the internship and existing technical interests.

There is a strong intent to start a software company, combining the business development, client engagement, and negotiation skills developed during the internship with technical product-building capability. This dual perspective, understanding both how to build a product and how to sell and position it to real clients, is expected to be a significant advantage in future entrepreneurial pursuits.

Another future goal is to become a Product Manager, a role that directly benefits from the combination of client-facing business skills and structured requirement-gathering experience gained during the internship. Understanding client needs deeply, translating them into actionable plans, and coordinating execution are all skills that were directly practiced throughout the internship.

There is also strong interest in launching AI-based business products, informed by the practical experience of using AI tools such as ChatGPT and Claude AI to support real business workflows during the internship. This experience has clarified how AI can be meaningfully integrated into business operations rather than used only as a novelty.

Going forward, there is a clear intent to continue improving business strategy skills and to expand business development knowledge further, through continued learning, real-world practice, and eventually applying these skills to build and grow an independent venture. The foundation built during this internship at Velvra Technologies will serve as an important stepping stone toward these long-term professional and entrepreneurial goals.

AL-AMEEN ENGINEERING COLLEGE

(Autonomous)

Accredited by NAAC with 'A' Grade | Accredited by NBA (B.E.EEE & B.E.ECE)
(Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai)
Karundevanpalayam, Nanjai Uthukuli Post, Erode – 638 104, Tamil Nadu, INDIA.
